

INTERCEPT® Data Collection, Display and Forwarding Software

INTERCEPT® automatically collects data from one to one hundred ZENO® and WEATHERPAK® stations, displays the data, organizes the data into files or a database, and allows users, with the proper permissions and password, to view the data with a web browser.

INTERCEPT® provides XML data feeds, so data can be ingested by other applications such as a database or web site.

INTERCEPT® allows users to configure alerts, and group multiple stations into “viewing groups,” making several stations easier to observe at a glance.

INTERCEPT® automatically synchronizes the time stamp of all stations with the attendant server.

INTERCEPT® provides user customizable log files, which can then be downloaded to the desktop via the user interface.

The screenshot displays the INTERCEPT web interface. At the top, there are navigation tabs for 'User', 'Records', and 'Help', and user role buttons for 'Observer', 'Maintenance', and 'Administrator'. The main header shows the 'INTERCEPT' logo and a 'Group 3' dropdown menu. Below this, there are tabs for 'Weather Summary', 'Wind Dials', and several station identifiers (USGS_HVO_09 through USGS_HVO_13). The main content area is divided into several sections:

- Station Info:** A table showing details for station USGS_HVO_10.

Observation	Value
Name	USGS_HVO_10
Zeno Time	15:09:55 PDT
Zeno ID	18
- Wind Display:** A circular gauge showing wind speed of 1.2 m/s and direction of 258°.
- Temperature, Pressure, Precip.:** A table showing various weather parameters.

Observation	Value	Unit
AT_Ext	23.6	°C
AT_Int	24.6	°C
Humidity	32	%
Pressure	1008.6	mbars
PP_accum	0.512	mm
- Zeno Status:** A table showing power and BIT status.

Observation	Value	Unit
Power	14.5	VDC
BIT	0	Hex
- Wind:** A table showing wind speed, gust, direction, and variance.

An inset window shows a similar view for station USGS_HVO_03, with a wind speed of 0.6 m/s and direction of 105°.

Day and night viewing screens are selectable as well as desktop and console views.

INTERCEPT® Features:

- An unlimited number of station groups can be created.
- Each station's data and status can be viewed individually.
- The user can choose the units displayed (MPH, MPS, Knots, C° or F°).
- A summary of all station data is displayed in tab view.
- Selectable day or night view; choose dark text on light background or amber text on dark background.
- Automatically synchronizes the time clock of all stations on the network.
- Software runs continuously and will automatically return to normal operation following a power interruption.

Region	Station Name	Zeno Time	Collector Time	Zeno ID	Speed: kts	Gust: kts

Alert Screen

Web Services & Database Features:

- Anyone, with proper permissions and password, can view data using any web browser.
- Data files are available on a network or the Internet (with proper permissions).
- Users can create simple alerts based upon a single sensor's data, or more complex alerts using data from multiple sensors.
- Alerts and error conditions are displayed on a ticker tape at the bottom of the display.
- The operational status of a network of weather stations can be viewed on the maintenance dashboard. The user can also view specific warnings or alarms for an individual station.
- An optional map interface features point-and-click access to individual ZENO® or WEATHERPAK® data.
- User customizable log files and user logs can be downloaded to your desktop through the user interface.
- Supports Windows® 7, 8, 10 and Linux.
