**COASTAL ENVIRONMENTAL SYSTEMS, INC.**  
**ZENO<sup>®</sup> Weather Stations - for Professional Applications**

---

**Seattle, WA** – Ever wonder what a datalogger with a Universal Serial Interface, 32-bit microcontroller, and no programming required could do for you?

Are you looking for a weather monitoring system to fit your needs and specifications to a “T” – without a bunch of “extras” you don’t need, or having to settle for one sensor manufacturer when you can choose from a world of sensors?

Coastal Environmental Systems’ ZENO<sup>®</sup> 3200 data logger is the only data acquisition system with a Universal Serial Interface which allows you to connect to virtually any sensor that has an output. The ZENO<sup>®</sup> can be configured to fit your needs, your communication requirements, deployment type, power usage, sensors, and overall weather monitoring application. Over the years, ZENO<sup>®</sup> has proven itself as the brain of our Weather Systems, from Commercial Off the Shelf (COTS) systems like our WEATHERPAK<sup>®</sup> 400 HazMat Weather Stations to entirely custom applications.

ZENO<sup>®</sup> 3200 may be a name you already know, but we’d like to invite you to check out our new **ZENO<sup>®</sup> Weather Stations Brochure** for a better look at just what ZENO<sup>®</sup> can do for you. The brochure, along with various other reference materials, can be found at:

[www.CoastalEnvironmental.com/reference.html](http://www.CoastalEnvironmental.com/reference.html) - or under the *Downloads* Section on our website.
