

Leaf Wetness

S1169Z

- **Records surface moisture**
- **Easily mounted in fruit trees, turf, or vegetable crops**

The leaf wetness sensor consists of a gold plated printed circuit board with a pattern that connects in the presence of moisture. Any moisture on the surface of this board acts as a contact closure. This energizes a timer which records the time in hours and minutes.

This sensor is useful in any agricultural application where it is necessary to determine scab hours.

Material:

Gold plated on PC board on PVC support

Output:

On-off or time-on in hours or minutes

Mounting:

Base mount or quad pod mount
