

3 Meter Portable Tower S80005

The 3 meter portable tower supports all of the meteorological sensors. The tower is constructed from aluminum and is supported by a tripod base. It is lightweight, rust free, and extremely rugged. The tower is constructed of special mil-spec 6061-T6 grade aluminum and is resistant to corrosion.

The tower can contain batteries to power the station, or it can have an external connector for auxiliary or outside power (12 VDC).

The tower can also be used as a junction to connect other sensors, solar panels, communication devices, or any combination of these.

It is designed for fast (less than 60 seconds) trouble free set-up. The tower fits, when disassembled, into a canvas carrying case, approximately 10" x 10" x 48", and it weighs only 24 lbs.
